## Airline itinerary Case

These data come from an Internet choice survey conducted by the Boeing Company in the Fall of 2004. Boeing was interested in understanding the sensitivity that air passengers have toward the attributes of an airline itinerary, such as fare, travel time, transfers, legroom, and aircraft. It was executed on a sample of the customers of an Internet airline booking service. The Internet service takes a specific user request for travel in a city pair and interrogates the web sites of airlines that provide service in that market, returning to the user a compiled list of available itineraries. While that interrogation is taking place, randomly selected customers were recruited to be surveyed.

A typical page of the survey instrument is shown in Figure 1. The respondent was offered three choices based on the origin-destination market request that the respondent entered into the itinerary search engine. The first alternative is always a non-stop flight, the second always a flight with 1 stop on the same airline, and the third is always a flight with 1 stop and a change of airline. The respondent was asked to rank the available choices as well as given the option to decline all of the stated options. Demographic data collected included age, gender, income, occupation, and education. Situational variables that were identified included: a) the desired departure time; b) trip purpose; c) who is paying for the trip; and d) the number in the travel party. All trips were for origin-destination city pairs in the United States.

There are 1633 respondents, each providing 1 SP response. Descriptions of the available variables are reported in Tables 1 to 4 and some descriptive statistics are given in Tables 5 and 6.

## Pick Your Preferred Flight

Three flight options are described for your trip from Chicago to San Diego. These are options that might be available on this route or might be new options actively being considered for this route as well as replacing some options that are offered now. The options differ from each other in one or more of the features described on the left.

Please evaluate these options, assuming that eveything about the options is the same except these particular features. Indicate your choices at the bottom of the appropriate column and press the Continue button.

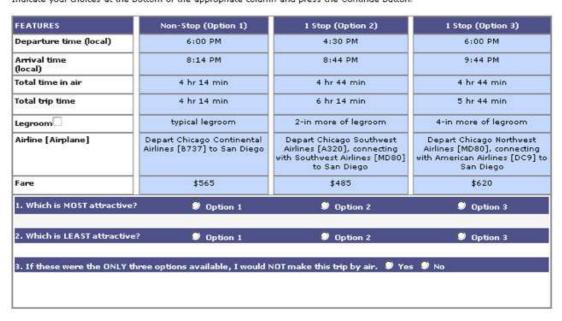

Figure 1: Example of Survey Instrument

| Variable                          | Description   |  |  |  |  |
|-----------------------------------|---|--|--|--|--|
| SubjectId                         | Unique identifier for each respondent.                                  |  |  |  |  |
| q17_Gender                        | 1 if male, 2 if female, 99 or -1 if missing.                            |  |  |  |  |
| q15_Age                           | Age, $(1 = Less than 18 years, 2 = 18-24 years, 3 =$                    |  |  |  |  |
|                                   | 25-34  years, 3.5 = 25-44  years, 4 = 35-44  years, 5                   |  |  |  |  |
|                                   | = 45-54  years, 6 = 55-64  years, 7 = 65-74  years,                     |  |  |  |  |
|                                   | 8 = 75 years or older, 99 or -1 if missing)                             |  |  |  |  |
| q19_Occupation                    | Occupation $(01 = \text{Executive and Managerial},$                     |  |  |  |  |
